DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Species in Fig. 3-7, claims 1-6, 10, 12-18 and 27 in the reply filed on 9/15/04 is acknowledged.

Specification

2. The abstract of the disclosure is objected to because it contains extraneous words such as "comprises " or "comprising". Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1, 10, 12, 17, 18 and 27 are rejected under 35 U.S.C. 102(e) as being anticipated by Puerto (2003/0231415).

Puerto teaches a layer heater comprising at least one resistive layer 107 comprising a resistive circuit pattern 107, the resistive circuit pattern defining a length and a thickness, wherein the thickness varies along the length of the resistive circuit and

Puerto's resistive circuit inherently produce a variable watt density (page 2, [0029], [0030]).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 2-5 and 13-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Puerto in view of Juliano et al (5,973,296).

Puerto teaches substantially the claimed invention, but does not teach spacing, dielectric layer and protective layer. Juliano teaches substantially the claimed invention having a heater system (Fig. 6) comprising a film resistive element 86 with spacing (Fig. 6A), a dielectric layer 84 and protective layer 48. It would have been obvious to one having ordinary skill in the art to modify Puerto's invention to include a spacing, a dielectric layer and a protective layer as taught by Juliano in order to improve heating characteristics of the heater and also to protect the heating structure.

7. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Puerto in view of Miyata et al (6,448,538).

Puerto teaches substantially the claimed invention including a thin film 107, but does not teach a sol-gel heater and thermal spray. Miyata teaches a sol-gel heater (col. 10, lines 10-20) and thermal spray (col. 20, lines 36-44). It would have been obvious to one

having ordinary skill in the art to modify the invention of Puerto and include a sol-gel heater in order to protect the exposed edge from the outside covering with a ceramic film as taught by Miyata (col. 10, lines 12-17), and also to make a thermally sprayed heater as conventional in the art as taught by Miyata (col. 20, lines 36-44).
